Disclaimer

This is a comprehensive report based on our automated and manual examination of cybersecurity vulnerabilities and framework flaws. We took into consideration smart contract based algorithms, as well. Reading the full analysis report is essential to build your understanding of project's security level. It is crucial to take note, though we have done our best to perform this analysis and report, that you should not rely on the our research and cannot claim what it states or how we created it. Before making any judgments, you have to conduct your own independent research. We will discuss this in more depth in the following disclaimer - please read it fully.

DISCLAIMER: You agree to the terms of this disclaimer by reading this report or any portion thereof. Please stop reading this report and remove and delete any copies of this report that you download and/or print if you do not agree to these conditions. This report is for non-reliability information only and does not represent investment advice. No one shall be entitled to depend on the report or its contents, and Soken and its affiliates shall not be held responsible to you or anyone else, nor shall Soken provide any guarantee or representation to any person with regard to the accuracy or integrity of the report. Without any terms, warranties or other conditions other than as set forth in that exclusion and Soken excludes hereby all representations, warrants, conditions and other terms (including, without limitation, guarantees implied by the law of satisfactory quality, fitness for purposes and the use of reasonable care and skills). The report is provided as "as is" and does not contain any terms and conditions. Except as legally banned, Soken disclaims all responsibility and responsibilities and no claim against Soken is made to any amount or type of loss or damages (without limitation, direct, indirect, special, punitive, consequential or pure economic loses or losses) that may be caused by you or any other person, or any damages or damages, including without limitations (whether innocent or negligent).

Security analysis is based only on the smart contracts. No applications or operations were reviewed for security. No product code has been reviewed.

Procedure

Our analysis contains following steps:

1. Project Analysis;
2. Manual analysis of smart contracts:
 - Deploying smart contracts on any of the network(Ropsten/Rinkeby) using Remix IDE
 - Hashes of all transaction will be recorded
 - Behaviour of functions and gas consumption is noted, as well.
3. Unit Testing:
 - Smart contract functions will be unit tested on multiple parameters and under multiple conditions to ensure that all paths of functions are functioning as intended.
 - In this phase intended behaviour of smart contract is verified.
 - In this phase, we would also ensure that smart contract functions are not consuming unnecessary gas.
 - Gas limits of functions will be verified in this stage.
4. Automated Testing:
 - Mythril
 - Oyente
 - Manticore
 - Solgraph

Terminology

We categorize the finding into 4 categories based on their vulnerability:

- Low-severity issue — less important, must be analyzed
- Medium-severity issue — important, needs to be analyzed and fixed
- High-severity issue — important, might cause vulnerabilities, must be analyzed and fixed
- Critical-severity issue — serious bug causes, must be analyzed and fixed.

Limitations

The security audit of Smart Contract cannot cover all vulnerabilities. Even if no vulnerabilities are detected in the audit, there is no guarantee that future smart contracts are safe. Smart contracts are in most cases safeguarded against specific sorts of attacks. In order to find as many flaws as possible, we carried out a comprehensive smart contract audit. Audit is a document that is not legally binding and guarantees nothing.

Token Contract Details for 05.09.2021

Contract Name: **BBTC**

Deployed address: **0x25e8825acC53a59d41a1b5819ac00Ff96b27707c**

Total Supply: **1,000,000,000,000**

Token Tracker: **BBTC**

Decimals: **18**

Token holders: **1**

Transactions count: **1**

Top 100 holders dominance: **100%**

Audit Details

Project Name: **BIG BTC**

Language: **Solidity**

Blockchain: **BSC**

Project Website: **bigbtc.io**

BBTC Token Distribution

BBTC Top 10 Holders

| Rank | Address | Quantity (Token) | Percentage |
|------|--|------------------|------------|
| 1 | 0xcead2c6adeed3829fb9d5d5ad28b748c280a2fbc | 100,000,000,000 | 100.0000% |

Vulnerabilities checking

| Issue Description | Checking Status |
|--------------------------------------|-----------------|
| Compiler Errors | Completed |
| Delays in Data Delivery | Completed |
| Re-entrancy | Completed |
| Transaction-Ordering Dependence | Completed |
| Timestamp Dependence | Completed |
| Shadowing State Variables | Completed |
| DoS with Failed Call | Completed |
| DoS with Block Gas Limit | Low-issues |
| Outdated Compiler Version | Completed |
| Assert Violation | Completed |
| Use of Deprecated Solidity Functions | Completed |
| Integer Overflow and Underflow | Completed |
| Function Default Visibility | Completed |
| Malicious Event Log | Completed |
| Math Accuracy | Completed |
| Design Logic | Completed |
| Fallback Function Security | Completed |
| Cross-function Race Conditions | Completed |
| Safe Zeppelin Module | Completed |

Security Issues

1) Out of Gas issue:

The function `excludeMultipleAccountsFromFees()` uses the loop to exclude multiple accounts from fees. Function will be aborted with `OUT_OF_GAS` exception if there will be a long addresses list.

```
function excludeMultipleAccountsFromFees(address[] memory accounts, bool excluded) public onlyOwner {
    for(uint256 i = 0; i < accounts.length; i++) {
        _isExcludedFromFees[accounts[i]] = excluded;
    }
}
```

2) Owner privileges:

- Owner can change Uniswap router address.
- Owner can change dividend tracker
- Owner can exclude from the fees.
- Owner can exclude and include addresses in `automatedMarketMakerPairs` array.
- Owner can change BBTC rewards, marketing, liquidity fee.
- Owner can change max wallet limit.
- Owner can blacklist addresses.
- Owner can change gas for processing.
- Owner can update `claimWait` value.
- Owner can change marketing wallet.
- Owner can exclude from dividends.

Recommendation:

Conclusion

Low-severity issues exist within smart contracts. Smart contracts are free from any critical or high-severity issues.

NOTE: Please check the disclaimer above and note, that audit makes no statements or warranties on business model, investment attractiveness or code sustainability.
